Scoop Highchair

**How to Use Instructions**

**1 Crotch Harness, Seat Strap and Waist Restraint**

Correctly installed

**2 Using Buckle**

Press firmly on centre button to release harness buckle

**3 Removing Crotch Harness**

First remove *table*, then gently lift *table cover* with flat head screw driver

Press firmly on both sides of the front of the *table cover bracket*

Lift up and remove *table cover bracket* with your thumb

*Table cover bracket* is now removed

Slide T section of harness through slot...

...and remove

*Table cover bracket*

**4 Re-installing Crotch Harness**

Follow the 'removing crotch harness' instructions in reverse and please take care when clipping *table cover bracket* back into place – if you place your fingers too low down on the sides you might catch your fingers - press on front sides whilst pushing down on the top until it clicks into place. Ensure crotch buckle is facing outwards when re-installing

**6 Re-installing Seat Strap**

Locate hole in seat shell, fold plastic T section at end of strap and push through hole. Ensure padlock symbol faces up so can be seen

Use *allen key* (supplied) to help push T section until it will go no further

Pull up on end of strap to ensure it is fixed securely

**5 Removing Seat Strap**

Locate padlock symbol on strap and pull just this part of the strap upwards firmly to remove

**7 Using Waist Restraint with Seat Insert**

Ensure *seat insert* is correctly placed inside seat and check that the hole in the *seat insert* lines up with the hole in the high chair seat

Feed chair strap through hole in *seat insert*, then follow **6** above

Insert waist restraint through chair strap, checking it is properly in place by pulling towards you

Click onto crotch harness buckle for correct use

**8 Using Seat Insert**

Ensure correct placement of *seat insert* inside seat

**9 Adjusting Height of Seat**

The height of the seat is adjusted on a gas strut, similar to an office chair.

To raise the seat, simply press down on the foot pedal and the seat will raise by itself

*(Please note - As your little one becomes heavier, the seat will not rise by itself if he/she is sitting in the high chair)*

To lower the seat press down on the foot pedal and at the same time push down on the seat until it reaches the required height

You may prefer to push down on either side of the seat

To lower the seat with table off, follow the same instructions

**10 Rotating Seat**

Pull out *rotation release handle* located at back of the seat. Seat swivels and locks every 90° degrees

**11 Releasing and Closing Table**

Locate *table release handle* underneath *table*, pull up and out to release

To close simply push *table* in

*Table* in fully closed position

**12 Adjusting Foot Rest**

Turn to loosen

Select required height

Turn to tighten

To remove foot rest entirely, refer to 'attaching seat assembly' instructions above. With the seat removed the foot rest can be slid off the *gas strut pole* attached to the seat. You may wish to remove the foot rest if your little one is more comfortable without one, or when you turn the Scoop from a high chair to a stool.

**WARNING** - never try to fix foot rest to bottom half of gas strut

**13 Converting Scoop from High Chair to Stool**

The Scoop can be used as a stool, either with or without the foot rest, up to the age of 5 years

Remove *table* from seat

Turn *table* over, locate clip and remove *table cover* with flat head screw driver

Insert *table cover* into seat

Press firmly until it clicks in

Converted to Stool

Please Note - complies with BS EN 14988:2006 Complies to this standard in high chair mode from 6 months to 3 years, but Brother Max has taken care to ensure safe for use in stool mode by children up to the age of 5 years or up to a weight of 23kg. It is always the responsibility of an adult to ensure that children over 3 years are safely using the scoop high chair in stool mode

**14 Removing Seat from the Gas Strut Pole**

To remove, simply follow in reverse step **4** overleaf in the 'Assembly Instructions'

Hold open *rotation release handle (RRH)* at rear and hold *seat* at front. Turn 90°, just past 90° lift and continue turning until *seat* lifts off
