

## FRAMELESS™ / the inspiration

An airline at fault for a suitcase that arrives damaged on the carousel, will usually pay for repairs. If it can't be fixed, they will negotiate a settlement to pay for its depreciated value.

This is rarely straightforward and many travellers are frustrated by the process.

An 'unbreakable' case that could withstand the treatment metered out by airlines, remained comparatively lightweight given its many protective features, and was affordable to all, captures the driving ambition of FRAMELESS™.

## FRAMELESS™ / the design

Impact resistant EVA shells are proven to be more resilient to damage than a hard case.

The unique structure allows the wheels to be positioned directly at the corners, thus making the case very stable and it will never fall over.

The absence of any internal frame means a reduction in weight and extra packing space, and the central expansion creates two balanced halves for easy packing.

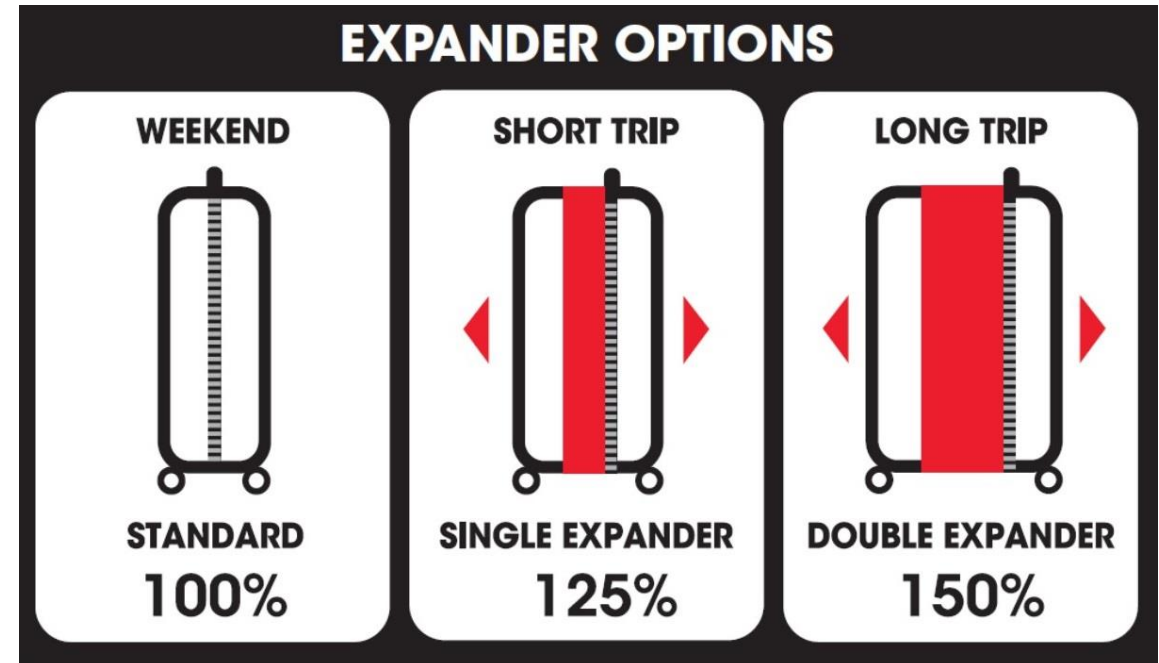

Over 2M satisfied customers to date.

## FRAMELESS™ / the versatility

The FRAMELESS™ cases which offer it luggage's patented double expander feature, provides users with the flexibility to increase available capacity by 25% or even 50%.

This makes a FRAMELESS™ case the perfect travel solution for short hops and family holidays.

## FRAMELESS™ / the versatility

The unique EVA panels on a FRAMELESS™ case are a perfect material for applying stunning emboss details and print artwork.

FRAMELESS™ cases are remarkable not simply in terms of their innovative construction, but also for their marked individuality and style.

The 10-Year warranty on each case ensures passengers can enjoy all the benefits for years to come with real peace of mind.
