Aperture and ventilation requirements

- The diagram below shows the aperture and ventilation requirements that you require to build the appliance into a housing unit.
- Ensure that the rear panel of the furniture housing unit has been removed.
- This oven may be installed without any additional ventilation cut outs being made in the housing unit. However, the ventilation cut shown in the diagram MUST be present, otherwise the microwave oven may not function correctly.
- Do not cover the ventilation slots or air intake points.

All measurements are in millimetres (mm)

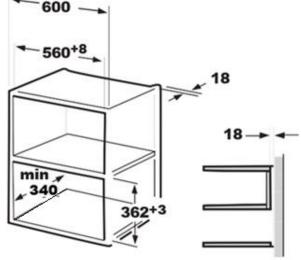

Built in under requirements

Important: No other methods of building under the microwave are sanctioned by the manufacturer

- The rear wall of the housing unit MUST be removed to allow there to be the correct amount of ventilation
- The ventilation gaps below the support shelf and below the worktop must be adhered to.
- An induction hob MUST NOT be fitted above the microwave.
- It is not necessary to have a storage drawer fitted underneath the microwave: this is shown purely as an example in the drawing above.

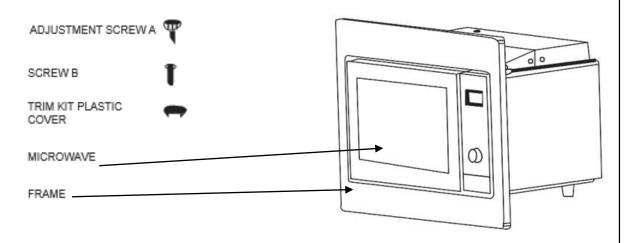

Warning: the microwave will get hot during operation: care should be taken not to accidentally come into contact with the outer surface.

Installation components

Step 1

Fit ADJUSTMENT SCREW A in to the adjustment screw hole on top of the microwave/UPPER AIR TUNNEL of the oven. ADJUSTMENT SCREW A should not be fully tightened at this stage.

Step 2

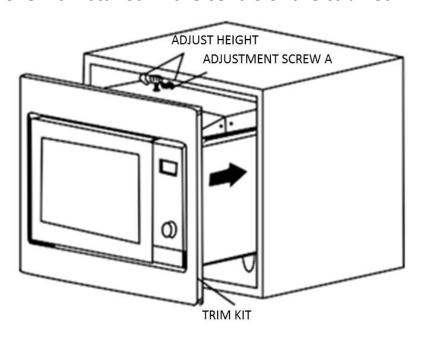

Place the microwave into the housing unit

Important: Do not push the microwave fully into the housing unit, as you still need to be able to access ADJUSTMENT SCREW A at this stage.

Adjust the height of ADJUSTMENT SCREW A to keep a 1mm gap between ADJUSTMENT SCREW A and the underneath of the top surface of the housing unit.

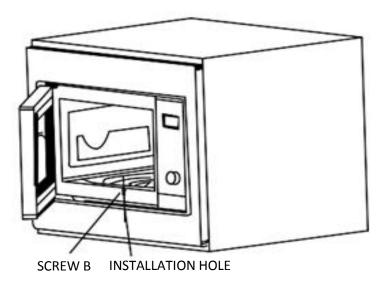

Push the microwave fully into the housing unit

Important: do not trap or kink the power cord and make sure that the oven is installed in the centre of the cabinet.

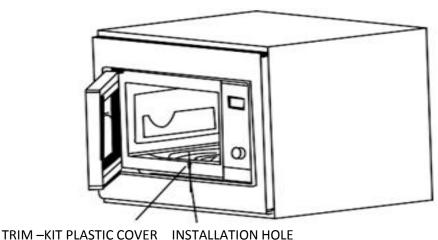

Step 3 Open the door and fit the oven to the housing unit with SCREW B at the INSTALLATION HOLE of TRIM KIT.

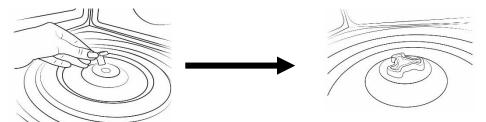

Step 4 Fit the TRIM-KIT PLASTIC COVER over the INSTALLATION HOLE.

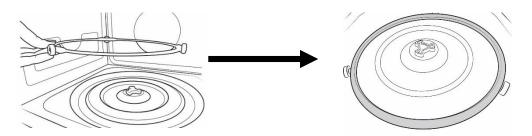

- Before first use, check that any securing tape and all packaging has been removed from the glass tray and turntable ring assembly.
- These parts must never be restricted from rotating.
- Never place the glass tray upside down.
- To assemble the turntable, follow the steps below in number order.

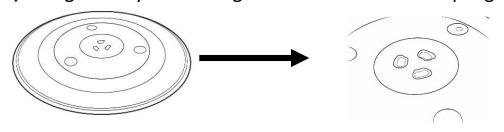

STEP 1) The turntable coupling should slot into the centre of microwave

STEP 2) The turntable ring slots into the indents in the microwave base

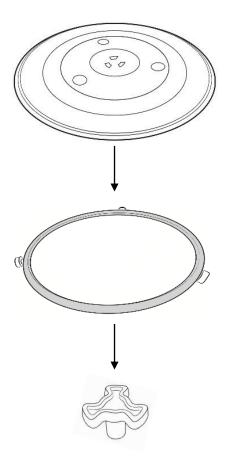

STEP 3) The glass tray should align with the turntable coupling

The glass tray, turntable ring, and turntable coupling assembly must always be used during cooking (as shown below).
