

# 12 Piece Drain Rod Set

Original Instruction Manual

Model No. AG19001

### GETTING HELP

If you have questions relating to this product please contact customer services

0800 0590111  
or [service@workprotools.com](mailto:service@workprotools.com)

**Important** - Please read these instructions fully before starting operating

These instructions contain important information that will help you get the best from your drain rod set, ensuring it is operated correctly and safely.

## In The Box

PARTS	DESCRIPTION
1	10 x 930mm rods
2	1 x double worm screw
3	1 x 100mm rubber plunger

When unpacking the box, do not discard any packaging materials until all of the contents are accounted for:

1. 12pc drain rod set
2. Operator's manual

## Operating Instructions

### STEP

- Screw the drain rods together tightly, in a CLOCKWISE direction, to achieve the required length.
- If it is necessary to twist the rods whilst pushing them through drain pipes, ensure that you do so in a CLOCKWISE direction to avoid unscrewing the rods.
- If a rod becomes stuck, do not try to release it by use of excessive force – this may punch a hole through the pipe. Gentle pulling and twisting (in a clockwise direction) should free the rod.
- Do not, under any circumstances, enter a drain. Only trained and certified drainage personnel using appropriate breathing apparatus may enter drains.
- Wear suitable wet work gloves at all times and avoid putting your hands in places where vision is limited.

## Warning

**Rotate and tighten the drain rods ONLY in a clockwise direction. Twisting in an anti-clockwise direction will loosen the rods & place undue strain on the threads. Failure to follow these instructions may result in snapped threads, and such action will be classed as misuse and void the product warranty.**
