EN For your safety read the enclosed instructions.

Keep the instructions for future reference. The information in this manual may not reflect recent updates as we continue to improve our products. Please see <https://www.supportdecathlon.com> for the latest version of the manual.. Decathlon is not liable for accidents or injuries due to improper use of the product, failure to adhere to the instructions given in this guide, or modifications to the product.

PRECAUTIONS

Always use the mask with the snorkel. This mask, designed for seabed observation, should be used under conditions at light to moderate intensity. This mask is not suitable for swimming. This piece of equipment should only be used in water on the surface. Do not go underwater, do not free dive.

This mask complies with the health and safety requirements of European regulation 2016/425 relating to personal protective equipment. It protects the eyes of the diver from coming directly into contact with the water. The window of the mask is resistant to impacts under normal conditions of use. Do not dive or jump into the water while wearing the mask. Do not carry the mask by the snorkel.

FOR CHILDREN

This product is not a toy. Not suitable for children under 10 years. Use only at a depth where the child can stand up and under the surveillance of an adult. Closely watch children who use the product.

INSTRUCTIONS

To ensure a perfect seal, choose a mask that fits your face. A particular size will not fit everyone. Make sure there's no space between the skirt and your face (beards can prevent a perfect seal). When using it for the first time, check the sealing of your mask against your face in shallow water where you can touch the bottom. Before putting the mask on your head, clip the snorkel to the stop and check that the seal is present. Put the mask on and position it correctly on the face. Make sure there is no hair in the mask. Then, adjust the strap using the 2 tightening buckles to ensure that the mask is secure and there are no gaps in the seal around the face. The strap must be centred at the top of the head.

Do practice removing the mask while standing in shallow water. You must be able to comfortably remove your mask if water infiltrates in the mask to prevent serious injury, drowning or death. Water could enter your mask from time to time, this is normal. Check that your equipment works properly before each use and that nothing is blocking the air flow and water drainage through the valve at the bottom of the mask. The mask has a «dry stop» system. This system was developed to avoid water from entering the snorkel when the sea is choppy or has ripples on the surface, or when the user leans his or her head too far forward to see the seabed. The snorkel has a buoy that, upon immersion, goes up into the snorkel to seal the opening. After diving, remember to blow out when returning to the surface to make sure that the float descends. Ensure good mobility of the buoy in the snorkel. If there is any water present, lift your head out of the water and the water will drain out gradually through the valve at the bottom of the mask. Keep your Easybreath mask away from sand to avoid scratching the lens. In the presence of sand, do not force the snorkel into place. Rinse the snorkel and mask first. Sand can also clog the float valve inside the snorkel. Use a key that you can fit through the snorkel's rear vents to unblock the float valve, then rinse the snorkel thoroughly.

Avoid contacts between the mask and solvents or detergents. To obtain maximum life from your product, avoid unnecessary exposure to sunlight. Do not leave the mask a long time under direct sunshine or high temperatures (60°C / 140°F).

Caution, if you leave your equipment in the sun, the dark parts can become very hot, beware before using it. This product can eventually cause reactions on sensitive skins. Stop using immediately should you experience irritation. If you have any doubts or questions, check with your medical practitioner.

MAINTENANCE INSTRUCTIONS

Thoroughly rinse the mask with fresh water after use. Make sure that all impurities (salt, sand, seaweed, etc.) have been removed. To ensure the proper functioning of the anti-fog system, wash the inside of the mask glass by hand with dishwasher soap regularly, being careful not to touch the valves located on each side of the nose and chin. Store in a dry, ventilated place away from sunlight.

TESTS & CONFORMITY

Product created and designed by Decathlon. In the absence of a specific normative reference applicable for surface snorkeling full face mask, the product has been test on the basis of a testing protocol conducted by INPP, test laboratory, Port de la Pointe Rouge, 13008 Marseille, France. The test protocol is based on the test methods for standards applied to diving masks (EN16805:2015) and snorkels (EN1972:2015 §3.4)

The product is subject to a limited warranty of 2 years worldwide. Please see the decathlon website in your country for more details and conditions..under licence from Ocean Reef Group.
