Easy to install

For air vent dryer

## Water vapour condenser

*The solution to turn your vent dryer into a condenser one*

### CHARACTERISTICS

The Universal Wpro Water Vapour Condenser for air vent dryer not connected to the exterior is the **best solution to prevent humidity and dust from entering the room**. The humid air vented by the dryer is condensed on contact with the water in the tank. The lint is also trapped within the tank. Diameter 102 mm. Length 1.3 m.

### THE RECOMMENDATION OF WPRO

Attach the hose to dryer and secure with the adjustable strap provided. Fit the hose to the tank cover and fill the tank with 2 cm (approx 3/4") of water. Snap cover on firmly. Run the dryer and when the program is complete, empty the tank.

Refill the water container with 2 cm (approx 3/4") before every dryer load. Ensure that adequate ventilation within the room is available.
