Since 1780

INSTRUCTIONS Easi-Lift Airing

Installation directly into the ground

Dig a hole around 50cm deep and 20cm square. Fill in part of the hole with your concrete mix and place the ground socket vertically in the centre. Continue to pour the rest of the concrete into the hole, ensuring the ground socket is held in an upright position. Allow this to set for around 48 hours before use.

Once the ground socket is installed, carefully place the rotary ailer into the socket.

Gently pull the arms to loosen them from the clips. **(1)**

Pull the drawstring upwards to open the ailer.

WARNING! Do not push the drawstring down. (2)

Adjust the height of the ailer by moving the collar. **(3)**

Keep pulling the drawstring upwards until you reach the desired tension and secure the lever into place **(4)**

You should ensure that a suitable location for the ailer is established making sure the rotary has room to rotate freely once the arms are fully extended.

When not in use

Fold down the ailer and store away safely when not in use or alternatively, use the rotary ailer cover provided to protect the ailer from adverse weather conditions.

5 YEAR
GUARANTEE
