

- If you have any queries or doubts about the use of your Vype Pebble or any other Vype products, please contact the Vype Customer Care Team.

About Vype Pebble battery

Vype Pebble contains a lithium-polymer battery.

Disposal and recycling of Vype products

Electrical and electronic goods and batteries should not be disposed of as part of regular household waste, but should be separately collected for recovery and recycling. We are committed to minimising our impact on the environment – please see our website, govype.com, for more information on how to dispose of your Vype products and details of our recycling programme and how to return used products to us.

How come you're reading this?

This is the small print, isn't it? No one reads the small print. Unless, of course, you're a bit like us. Someone who likes to know what goes into things. How things work. That sort of a someone.

At Vype, we put time, care and research into every single eLiquid we make. After all, it's the vapour that you inhale and the vapour that delivers the satisfaction. So from the purity of our ingredients to the consistent quality of our vapour, we make sure everything is spot on for your satisfaction. And if you find it isn't, then just let us know.

For the perfect vape:

First things first: make sure the battery is fully charged

before you use it for the first time. Really: we promise this will make your vape better.

- Pop your flavour cartridge into the battery unit.
- To switch your device on, simply hold the on/off button for a second.

- To switch it off, you also hold the on/off button for a second.

- If you vape for more than 8 seconds without stopping, the light on the button of Vype Pebble will flash red and shut itself down. You'll have to wait 10 seconds before you can use it again.

- And if you leave it to one side for 10 minutes, it will shut itself down to save your battery. Helpful, right?

- Please don't try to refill the cartridge: it might leak and damage your device.

- One last thing. Make sure you only use Vype Pebble cartridges with the Vype Pebble device. We've worked hard to make sure they work together brilliantly, so you can always enjoy a great vape.

How do you know when you need a new Vype Pebble cartridge?

Don't worry, you'll know: either you won't be getting any vapour at all, or you'll notice it doesn't taste quite the same as usual.

Also, make sure it's not because your battery has run out that you're not getting any vapour. And remember, you can always swap your cartridge for a different flavour any time; you don't have to wait for one to finish before trying a new one.

What does that little light mean?

It's simple. When your Vype Pebble is off, the light is off. When you turn it on, the light

tells you how much battery you have.

- **Green:** Your battery is charged.
- **Amber:** Your battery is running low.
- **Red:** You need to recharge your battery.
- **Flashing Red:** Your battery is out of charge and will turn off.

And when you vape, the light will show the charge level of your battery.

If the light starts quickly flashing 'red/amber/green' contact our customer care line.

How to charge your Vype Pebble

Connect the USB charging cable to the USB port on your Vype Pebble and insert the other end of the cable to the USB port of a computer or you can use a Vype USB car charger or wall plug, which you can get from govype.com.

- The light on your Vype Pebble will flash on and off while it's charging, and it'll change colour from 'red' to 'amber' to 'green' as it powers up.
- When the light stays green, your Vype Pebble is ready to go.
- It takes approximately 1 hour to fully charge your Vype Pebble.

More important things to know

- To avoid risk of fire, injury and/or damage to your Vype Pebble or other property, only charge your Vype Pebble battery with the equipment provided in your Vype Pebble kit or with compatible Vype charging accessories (available at govype.com).
- Never leave your battery unattended whilst on charge.
- Do not use e-cigarettes when you, or anyone in the vicinity, is using oxygen.

- Rating input of USB charging cable: DC 4.2 V 500 mA.

- The build-up of dirt on the base of your Vype Pebble cartridge and/or the top of your battery unit may prevent you from enjoying your experience and it may disrupt normal operation. To prevent this, detach your Vype Pebble top from the Vype Pebble battery, check and if necessary clean with a dry cloth.

- The USB charging cable will automatically stop charging your Vype Pebble battery after a period of 3 hours. The battery controller has an overvoltage, an overcurrent and a short-circuit protection function during charging. If any faults occur during charging, the LED indicator will flash red/amber/green and the battery will shut down.

- The battery controller has a short-circuit protection function: during inhalation, if the battery short circuits, the light on the button will flash red/amber/green and the battery will shut down.
- Your Vype Pebble device is only suitable for operation between 0-40°C. If your device is operated outside of this temperature range it may be damaged or stop working.
- Keep Vype products dry. Precipitation, humidity or moisture can corrode electronic circuits.
- The recommended storage temperature for Vype products is between 0-25°C.
- Protection provided by the equipment may be impaired if used in a manner not specified by the manufacturer.
