# Safety Instructions

**Important note:** Please read this booklet before installing and switching on this appliance. The manufacturer assumes no responsibility for incorrect installation and usage as described in this booklet.

 **Warning:** When positioning the appliance, ensure the supply cord is not trapped or damaged.

 **Warning:** Do not locate multiple portable socket-outlets or portable power suppliers at the rear of the appliance.

- This model uses natural refrigerant gas as part of its cooling system. This gas is known as R600a (Isobutene) and is environmentally friendly but can be combustible. Care should therefore be taken when handling or transporting the product to ensure that none of the refrigeration circuit components are damaged,
- Do not obstruct ventilation openings in the appliance
- The appliance must not be placed or rested on its power cord.
- Do not use mechanical devices or other artificial means to accelerate the defrosting process, such as a heater or a hair dryer.
- Do not use electrical appliances in the refrigerator compartment of the appliance.
- If this appliance is to replace an old refrigerator with a lock, the lock must be removed as a safety measure before storing it or disposing of it. This is to protect children from locking themselves inside the appliance.
- Old refrigerators and freezers contain insulation gases and refrigerant, they must be disposed of properly. Contact your local authority or your dealer if you have any questions. Please ensure that you do not damage the scrap unit prior to being picked-up by the relevant waste disposal service.
- Do not use adaptors or extension leads when connecting the appliance to the electrical power supply

- Do not plug in damaged plugs.
- Do not pull, twist or damage the power cable.
- Do not plug-in or un-plug the appliance with wet hands to prevent electrical shock.
- This appliance can be used by children aged from 8 years and above and persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved. Children should not play with the appliance.
- Children aged from 3 to 8 years are allowed to load and unload this appliance.
- This appliance is designed to be used by adults, do not allow children to play with the appliance or let them hang over the door.
- Do not place explosive or flammable material in your appliance for your own safety.
- Bottles containing a high percentage of alcohol must be sealed well and placed vertically in the refrigerator.
- Do not cover the body or the top of the appliance
- Fix down the accessories in the appliance during transportation to prevent damage to them.
- To avoid contamination of food, please respect the following instructions
  - Opening the door for long periods can cause a significant increase of the temperature in the compartments of the appliance.
  - Clean regularly surfaces that can come in contact with food and accessible drainage systems.
  - Store raw meat and fish in suitable containers in the refrigerator, so that it is not in contact with or drip onto other food.
  - Two-star frozen-food compartments(if they are presented in the appliance) are suitable for storing pre-frozen food, storing or making ice-cream and making ice cubes.

- One-, two- and three -star compartments (if they are presented in the appliance) are not suitable for the freezing of fresh food.
- If the appliance is left empty for long periods, switch off, defrost, clean, dry and leave the door open to prevent mould developing within the appliance.

## Electrical Safety

### **THIS APPLIANCE MUST BE PLUGGED INTO AN EARTHED SOCKET**

- Before switching on, make sure that the voltage of your electricity supply is the same as that indicated on the rating plate. This product is designed to operate on 220 – 240V AC; 50Hz. Connection to any other power source may damage the unit.
- This product may be fitted with a non re-wireable plug. If it is necessary to change the fuse in the plug, the fuse cover must be refitted. If the fuse cover becomes lost or damaged, the plug must not be used until a suitable replacement is obtained.
- If the plug has to be changed because it is not suitable for your socket, or becomes damaged in any way, it should be cut off and an appropriate plug fitted following the wiring instructions. This should be carried out by a qualified electrician. The plug removed must be disposed of safely, as insertion into a 13 Amp socket is likely to cause an electrical hazard.

## Transportation and Handling

For safe lifting, tilt the appliance backwards by no more than 45 degrees, hold the base and rear corners of cabinet. Lift the refrigerator carefully. Never use the door handles for lifting. To move the refrigerator on a flat level surface, tilt it slightly backwards and push backwards.

**This unit is heavy and could cause injury – ensure there are adequate people present to move the appliance.**

# Installing and Switching on Your Appliance

- Operating voltage for your appliance is 220-240V at 50Hz.
- Before plugging in the power supply, ensure that the voltage on the rating label corresponds to the working voltage of your electrical system in your home.
- Insert the plug into an efficient Ground (Earth) connection. If the socket has no Ground (Earth) contact or the plug does not match, we suggest you call an authorised electrician for assistance.
- Place your appliance in an area that is not exposed to direct sunlight.
- Your appliance should be placed at least 10cm away from stoves, ovens and other heating cores.
- This appliance should never be used outdoors or left in the rain.
- When your appliance is placed next to a chest freezer or freezer, there should be at least 10cms between them to prevent humidity on the outer surface.
- Do not place anything on your appliance and install the unit in a suitable place so that there is at least 30cm clearance above the appliance.
- If placing your appliance next to kitchen cabinets, leave 5cm between them.
- The rear of the appliance should be at least 6cm away from the back wall.
- The appliance must be used in the vertical position and on a flat surface.
- To level the appliance, use the adjustable feet on the appliance.
- Do not place your appliance on a carpeted surface as this will prevent adequate ventilation.
- This appliance is not intended to be built-in to worktops or other units, unless specifically outlined in this instruction manual. All vents must remain clear of obstruction to ensure safety and performance..
- This appliance should only be placed on a flat, firm surface.
- Choose a dry and well-ventilated space.
- The appliance should be positioned so that the plug is easily accessible.
- Suitable for storage in a garage, outbuilding or shed (can operate in a ambient temperature up to -15°C).
- If you need help or are unsure how to install the unit, please contact Customer Services on 0345 208 8750 or visit **[mda.russellhobbs.com](http://mda.russellhobbs.com)**.

**! WARNING!** During use, service and disposal of the appliance, please pay attention to symbol similar to the one shown, which is located on rear of the appliance (rear panel or compressor) and with a yellow or orange colour. It's risk of fire warning symbol. There are flammable materials in refrigerant pipes and compressor. Please be far away from fire source during use, service and disposal.

## Before Switching On

- Before using your appliance, add a teaspoon of bicarbonate of soda to warm water and with a damp cloth wipe down all parts of the new appliance, then repeat the process with a clean damp cloth and dry. **(ensure the appliance is not connected to the power when performing this task).**
- Remove all transport tapes and foam protection pieces . Clean the interior with a cloth dampened in lukewarm soap and water. Wipe with clean water and wipe dry.
- There may be an odour when you first switch on the appliance, it will disappear when the appliance starts to cool.
- Install the plastic distance guide, this is on the condenser pipes (the black pipes) on the rear of the appliance, by turning it 90° (as shown below) to prevent the condenser pipes from touching the wall. The distance between the appliance and back wall must be a **minimum** of 25mm and a **maximum** of 75mm.

- When the appliance has been positioned, adjust the feet to ensure the unit is stable. This is essential to ensure quiet running and proper door opening /closing.
- Connect to the electrical socket but do not switch the power to the refrigerator on for at least 3 hours. The coolant within the product needs time to settle after it has been transported and put in to position, failure to do this will affect the cooling performance of your appliance.

- Once the appliance has settled, locate the thermostat dial on the product and set to “-20” position and switch on the power. The compressor will begin to work. Close the door.
- You may hear faint gurgling or bubbling sounds when the refrigerant is pumped to the cooling system and through the coils or tubing at the rear of the appliance. When the compressor is in operation you may hear a slight whirring sound or pulsating noise. The thermostat controls the operation of the compressor, and you may hear a slight click as it cycles in and out (this is normal).
- To save energy, you should minimize the frequency and duration of door opening.

### Vacuum Balancer Fitment Instructions (Optional)

- After closing the doors, a vacuum seal may form that will prevent re-opening of the doors for around 1 minute. To prevent this, we have included an optional Vacuum Balancer with your appliance.
- The Vacuum Balancer is a small piece of plastic applied to the bottom of the freezer by removing the tape attached, and sticking to the lower part of the freezer as shown below.

Note: The Vacuum balancer should be positioned a minimum of 60mm, to a maximum of 100mm from the outside of the appliance/

# Product Overview

- |                                     |                     |
|-------------------------------------|---------------------|
| 1. Temperature control & indicators | 4. Adjustable Feet  |
| 2. Freezer flaps (4 star rating)    | 5. Ice Cube Tray    |
| 3. Freezer drawers (4 star rating)  | 6. Vacuum Balancer* |

## Unit Parts & Spare Parts

Before installation, check that all parts detailed in the product overview are present. If any parts are missing, please contact the Customer Service team on **0345 208 8750** or visit us at **[mda.russellhobbs.com](http://mda.russellhobbs.com)**

*\*See Vacuum Balancer Fitment instructions on Page 8*

# Usage

**!** Allow to stand for a minimum of 3 hours before plugging in to the mains

The temperature in the appliance is controlled by the temperature control panel located inside the freezer above the cavity. Press the control buttons to regulate the temperature inside the freezer.

Plug in the appliance, and the internal lights may not illuminate for 1 minute whilst start-up tests are performed.

- |    |                        |    |                       |
|----|------------------------|----|-----------------------|
| 1. | Temperature Set Button | 3. | Alarm Indicator       |
| 2. | Super Freeze Indicator | 4. | Temperature Indicator |

The sequence of the temperature setting is below:

**-16 – -18 – -20 – -22 – -24 – SUPER FREEZE**

The recommended temperature setting is “-20”.

Once the temperature control has been set, close the door. We recommend that the door is not opened for a minimum of 4 hours to allow the appliance to reach the standard operating temperature.

Note: The standard operating temperature for the 4 star freezer compartments should be between -18°C and -25°C

# Usage

## Super Freeze super

This function should be used as a rapid cool/freeze setting and is beneficial when freezing large amounts of food and preventing the loss of nutrients. Set this function 3 hours before a large amount of food is placed in the freezer. The temperature control will automatically revert back to its previous setting after a period of maximum 54 hours.

If required then the temperature can be changed manually by pressing the "TEMPERATURE SET" button.

## Door open warning

If the door of the appliance are open for more than 3 minutes the door open warning light will flash continuously. Close the door to stop.

## Power cut memory

In case of a power failure, when the power is restored the appliance will retain its settings.

## Fault alarm

When the alarm indicator keeps flashing (with the corresponding indicator light of "-16, -20, -24, or fast freezing" flickering simultaneously), it indicates fault with the refrigerator. Please contact customer services.

## Standby

Set the temperature to -16° and then hold the Temperature Set button until all 3 LED's start blinking. This will stop normal fridge operation.

To restart the fridge, press and hold the temperature set button. The Door Open Alarm LED may light up as the appliance is warmer than normal operation. This will stop once the door is closed and the freezer reaches its operating temperature.

# Door Reversal

You will need to tilt the appliance backward to access the lower hinge which holds screws. Do not tilt more than 45 degrees and do not lay the appliance flat on its side.

For your own safety, a minimum of 2 people should lift or tilt this product.

Tools Required: Torx headed screwdriver, flat headed screwdriver and hexagonal spanner.

1. Remove the hinge cover and the screws from the hinge bracket, take it off and remove the door by lifting it up and away.

2. Remove the screw cap covers that are on the top left of the unit and fix them on to the opposite side.

3. Remove the door bushing & hole cover from the top of freezer door and fix it to the opposite side.

# Door Reversal

4. Tilt the appliance carefully, no more than 45 degrees and remove the adjustable foot.

5. Take off the bottom hinge by removing the screws and moving the pin.

6. Move the hinge to the opposite side, install and affix feet.

# Door Reversal

7. Move the bung on the bottom of the door to the opposite side.

8. Place the door on to the bottom hinge and put the pin of the upper/top hinge into the top of the door and fix the hinge in to place by screwing it to the top of the freezer (use a spanner to tighten it if necessary. **Ensure the door is aligned horizontally and vertically so that the seals are closed on all sides before finally tightening the top hinge.**)

## Energy Saving Advice

- Do not install the appliance close to sources of heat, such as a cooker, dishwasher or radiator.
- Locate the appliance in a cool well-ventilated room and make sure that the air vents are clear.
- Try to avoid keeping the doors open for a long time, warm air will enter the cabinet and may cause a build-up of ice as well as affecting the energy consumption. Ensure there are no obstructions preventing the doors from closing properly.
- Ensure that the door seals are clean and there are no tears or splits.
- Do not overload the appliance: the cooling air that circulates to keep the appliance cold gets blocked and pockets of warm air form.
- Do not put hot food into the freezer – let it cool down first.

## Freezer Storage Advice

- Store fresh food in airtight boxes or wrap in bags or foil which are suitable for freezing.
- Do not allow frozen food into direct contact with food to be frozen.
- Pre-frozen food must be placed in the freezer as quickly as possible after purchasing.
- To prevent frost damage to fresh vegetables or fruits they must be processed appropriately before being placed into the freezer compartment.
- You must always follow the storage guidelines printed on all food packaging. However, below is some suggested maximum storage times at -18°C (4 star freezer rating) for a variety of foods:
  - Fresh meat & poultry – up to 12 months
  - Cooked meat – up to 2 months
  - Fresh fish – up to 6 months
  - Fruit & vegetables – up to 12 months
  - Bread & cakes – up to 6 months

# Power Failure

If there is a power failure during the storage of frozen foods, keep the door closed. If the temperature within your freezer should rise, do not refreeze the food without checking it's condition.

- **Ice Cream:** Once thawed should be discarded.
- **Fruit and Vegetables:** If soft should be cooked and used up.
- **Bread and Cakes:** Can be refrozen without danger.
- **Shellfish:** Should be refrigerated and used up quickly.
- **Cooked Dishes:** i.e. casseroles should be refrigerated and used up.
- **Large Pieces of Meat:** Should be refrigerated and used up quickly
- **Small Joints:** Should be refrigerated and used up quickly
- **Chicken:** Should be refrigerated and used up quickly

# Food Storage Guidelines

Refrigerator compartments	Type of food
Freezer drawer(s)/shelf	Foods for long-term storage. Bottom drawer/shelf for raw meat, poultry, fish. Middle drawer/shelf for frozen vegetables, chips. Top drawer/shelf for ice cream, frozen fruit, frozen baked goods.

# Maintenance & Cleaning

**Disconnect the appliance from the power supply before cleaning.**

## Internal Cleaning

- Do not pour water over the appliance.
- The cavity should be cleaned periodically using a solution of bicarbonate of soda and lukewarm water (5ml to 0.5 litre of water)
- Clean the accessories separately with soap and water. Do not put them in the dishwasher.
- Do not use abrasive products, detergents or soaps.
- After washing, rinse with clean water and dry carefully.
- When you have finished cleaning reconnect the plug with **dry hands**.

## External Cleaning

- Wash the outer cabinet with warm soapy water. Do NOT use abrasive products.
- There are sharp edges on the underside of the product so care should be taken when cleaning.
- Once or twice a year dust the rear of the appliance and the compressor at the back of the appliance, with a brush or vacuum cleaner, as an accumulation of dust will affect the performance of the appliance and cause increased energy consumption.

## When the appliance is not in use

When the appliance is not in use for long periods, disconnect from the electricity supply, empty all of the food and clean the inside. Leave the door open to prevent the build-up of odours.

# Maintenance & Cleaning

## Defrosting

The refrigerator is a frost free product and will therefore defrost itself automatically. However in case the refrigerator is not defrosting then the refrigerator can be defrosted manually.

**Note: Care must be taken when performing the following procedure.**

- Defrost twice a year or when a frost layer of approximately 7 mm (1/4") has formed.
- 6 hours before the defrosting process, set the temperature to its coldest setting to make sure the food is at the lowest temperature before removing the frozen foods. All food should be wrapped in several layers of newspaper and stored in a cool place (e.g. fridge or larder).
- Place several layers of new paper or towels underneath and next to the freezer door/compartments
- Use the manual defrost process detailed in the next steps or switch off the appliance at the socket outlet and pull out the mains plug.
- To use the manual defrost process (the units has to be plugged in and power on):
  - Press and hold down the "SET" button for 15 seconds. All the indicator lights illuminated, the refrigerator will stop cooling and will start to defrost by entering into heat mode. The frost and ice will be defrosted and will eventually be removed.
  - During the defrosting process, you can press and hold the "SET" key for 3 seconds to stop defrosting manually, or wait until the defrosting program has finished and is exited automatically.
  - Avoid frequent defrosting of the refrigerator, do not access the manual defrosting again within 10 minutes of manually disabling it.
- Remove all drawers, baskets, etc. and leave the door or lid open. Containers of warm water (not hot) may be placed carefully in the freezer to speed up the defrosting process.
- Never use hairdryers, electrical heaters or other such electrical appliances for defrosting.
- When the ice has melted, clean and dry the interior. Wipe up any spillages that may have occurred.
- Switch the appliance on (if it has been turned off) and replace any frozen food.

**Never use sharp metal tools as it may damage the appliance.**

**Never use an electrical heater, this may cause an electric shock.**

# Trouble shooting

Problem	Solution
The freezer doesn't work	Check that the appliance is switched on.
	Check that there has not been a power cut.
	Check that the plug is not faulty.
	Check that the fuse has not blown.
	Check that the voltage is correct for the appliance.
	Are there any faults with the socket? For this purpose, try the plug of your appliance by connecting it to a socket which you are sure is working.
The temperature inside the appliance is not cold enough	Check that there is not too much food in the appliance.
	Check that the thermostat is set to a suitable temperature.
	Check that the appliance is not placed in direct sunlight, or too near to a heating source.
	Check that the ambient temperature is within the operation limits of the appliance.
	Are the doors of the appliance opened frequently? Once the door is opened, the humidity found in the air in the room enters the appliance, especially if the humidity levels in the room are very high. The more frequently the door is opened in humid conditions the more chance of the build up of moisture.
The temperature within the appliance is too cold.	Increase the working temperature by adjusting the temperature control to a higher temperature
The inner surfaces of the appliance are wet	Caused by condensation - dry the inside of the appliance.
The outer surfaces of the appliance are wet	Caused by condensation - dry the outer of the appliance carefully.
Excess ice or frost has built up inside the appliance	Check that the door has not been left open.
	Check that the door gasket is clean and undamaged.

# Trouble shooting

Problem	Solution
Smell/odour	<p>Check all the food and drink that is in the freezer is correctly packaged. If it isn't then it should be removed immediately or repackaged.</p> <p>Check for spillages on each shelf, flap and drawer. You may need to remove the drawers to check that no spillages have settled underneath them. As spillages that have not been cleaned and have been left can cause smells and unwanted odours.</p>
The doors do not close properly	Ensure there are no obstructions preventing door closure.
	Check the door compartments and shelves are correctly in place.
	Check the door seal is not warped or torn.
	Check the appliance is level.
Unusual noises	Check that the appliance is on a flat, level surface and is stable.
	Check the spacing's around the appliance and ensure it is not touching other items.
	<b>Bubbling and gurgling sound:</b> • This noise is emitted as the coolant fluid flows through the pipes within the system. This is normal.
	<b>Water flowing sound:</b> • This is the normal sound of water flowing into the drain trough during the defrosting process.
<b>If the appliance is operating noisily (compressor noise):</b> This is normal. This noise indicates that the compressor is operating normally. As the compressor is being energized, it might run a bit more noisily for a short period of time.	
All indicator lights on the display panel ON	Is the defrosting function enabled? Hold down the SET key for 3 seconds (for details, refer to the Defrosting function on page 10)

## Error codes

Error code	Solution
When the alarm indicator keeps flashing (with the corresponding indicator light of “-16, -20, -24, or fast freezing” flickering simultaneously)	Indicates fault with the refrigerator. Please contact customer services.

# Connection to the Mains Supply

## **WARNING- THIS APPLIANCE MUST BE EARTHED**

This appliance is designed to operate from a mains supply of AC220V - 240V; 50HZ. Check that the voltage marked on the product corresponds with your supply voltage.

For UK use only – Plug fitting details (where applicable):

As the colours of the wires in the mains lead of this appliance may not correspond with the coloured markings identifying the terminals in your plug, proceed as follows:

The GREEN/YELLOW wire is the EARTH and must be connected to the terminal which is marked with the letter E or by the earth symbol or coloured GREEN or GREEN/YELLOW.

The BLUE wire is the NEUTRAL and must be connected to the terminal marked with the letter N or coloured BLACK.

The BROWN wire is the LIVE wire and must be connected to the terminal marked with the letter L or coloured RED.

Always ensure that the plug cord grip is fastened correctly.

If a 13A (BS1363) fused plug is used it must be fitted with a 13amp fuse conforming to BS1362 and be BSI or ASTA approved.

# Guarantee

This product is guaranteed for 12 months from the date of the original purchase. If any defect arises due to faulty materials or workmanship you must contact Product Care with the original proof of purchase so a replacement or refund can be arranged.

Refund or replacement is at the discretion of Product Care.

## **The following conditions apply:**

- Product Care will require a valid proof of purchase at the point of replacement or refund.
- The product must be installed and used in accordance with the instructions contained in this instruction guide and any other instructions for use which has been supplied.
- It must be used for domestic purposes only and for its intended use.
- This guarantee does not cover wear and tear, damage, misuse or consumable parts.

**This does not affect your statutory rights.**
