CAT6a
ETHERNET CABLE
USER MANUAL

Introduction

This Cat6a Ethernet cable gives you a fast, stable wired connection for computers, consoles, smart TVs, NAS drives and other network devices. Its flat, braided design is flexible and easy to run under carpets, along walls or behind furniture.

Features

- Speeds up to 10Gbps
- 500MHz bandwidth
- Pure copper conductors for stable, low-loss transmission
- Flat design: easy to route and saves space
- Braided outer jacket for extra durability
- Shielded RJ45 plugs with gold-plated contacts
- Backward compatible with Cat6 and Cat5e

Specifications

Model:	OPP146 (2m), OPP147 (5m), OPP148 (10m)
Category:	Cat6a
Max Speed:	10Gbps
Bandwidth:	500MHz
Conductors:	Pure copper
Cable Type:	Flat, PVC with braided outer jacket
Connectors:	RJ45 (8P8C), shielded, gold-plated contacts
Operating Temp:	0°C to 60°C
Use:	Indoor Only
In the Box:	Cat6a Cable, user manual

Instructions

Instructions
Plug one end into your router, modem or switch, and the other into your device. Make sure both plugs click fully into place.

Care
- Avoid sharp bends, pulling or twisting the cable.
- Keep away from heat sources and sharp edges.
- For indoor use only.
- Stop using the cable if it is damaged.

Troubleshooting
No connection? Check both plugs have clicked fully into place, and that the port lights on your router and device are on. Not reaching full speeds? Check your router, device and internet plan support the speeds you expect. Most home equipment runs at 1Gbps, and 10Gbps needs 10-gigabit network ports at both ends.
